## PROFILE

---

**Final-semester Computer Science student (specialization: Robotics and Intelligent Autonomous Systems) at the Polish-Japanese Academy of Information Technology.** I program in Python – machine learning and computer vision (PyTorch, OpenCV), data processing (pandas, SQL, ETL), and LLM-based applications: I deploy models locally (Ollama) and build agents that use tools (tool calling, Claude API). I'm looking for an internship or first junior position.

## EDUCATION

---

### **Polish-Japanese Academy of Information Technology, Warsaw**

10.2023 – present · Computer Science (B.Eng.) · Specialization: Robotics and Intelligent Autonomous Systems

- Engineering thesis: *"Anomaly detection in video surveillance using a temporal autoencoder"*

## CERTIFICATIONS

---

### **Building with the Claude API – Anthropic**

2026 · online course (Skilljar), certificate of completion

- Messages API, prompt engineering, tool use / function calling, prompt caching, streaming

### **AI Agents Course (Fundamentals of Agents) – Hugging Face**

2026 · online course, certificate of completion

- LLM agent fundamentals: the Thought–Action–Observation loop, tool use, building an agent from scratch

## PROJECTS

---

My projects cover, among others: **local LLM deployment and AI agents** (an offline assistant on Ollama, an agent loop with tool calling), **data processing** (a Python ETL pipeline – data validation, star schema, SQL database, Parquet), **desktop applications with AI integration** (Tauri, React, Claude API), and **computer vision** (CNNs in PyTorch, OpenCV algorithms). Code and write-ups: [github.com/tobiamart](https://github.com/tobiamart).

## TECHNICAL SKILLS

---

**Programming languages:** Python (fluent), SQL, TypeScript, Java, C++, C#

**AI / ML:** PyTorch, OpenCV, neural networks (CNNs, autoencoders), computer vision, machine learning

**LLM / AI engineering:** Claude API (Anthropic), Ollama, local LLM deployment (on-premise), AI agents, tool calling / function calling, prompt engineering, prompt caching, streaming

**Data:** SQL (SQLite), pandas, NumPy, Matplotlib, ETL, data modelling, data validation and cleaning, Parquet, CSV

**Backend / web:** Flask, REST API, Node.js, React, Tauri

**Tools:** Git, GitHub, Docker, Linux, Windows, PowerShell, Jupyter Notebook, Vite

**Languages:** Polish (native), English (advanced)
